
BACKEND ENGINEER | JAVA | MICROSERVICES | DISTRIBUTED SYSTEMS

Backend-focused engineer with 2+ years of experience building scalable, high-performance systems using Java, Spring Boot, and microservices architecture. Proven track record of optimizing APIs, improving system throughput, and designing distributed systems for real-world business workflows. Strong foundation in data structures, system design, and performance engineering. Experienced in caching (Redis), event-driven systems (Kafka), and real-time communication (WebRTC).

EXPERIENCE

Full Stack Developer

Natlov Technologies Pvt Ltd

Jan 2026 – Present

- Developing and scaling backend services using Java, Spring Boot, focusing on performance and clean architecture.
 - Improved API performance by ~20% and enhanced system reliability by optimizing backend services and resolving production issues.
 - Building and integrating Next.js frontend with backend APIs to deliver seamless end-to-end user experiences.
 - Automating CI/CD pipelines using Jenkins to improve deployment efficiency.
 - Reviewing pull requests and maintaining code quality standards.
-

Backend Engineer

Railse

Nov 2024 – Dec 2025

- Designed and scaled RESTful APIs for CRM reporting, payment settlement, and logistics workflows within a distributed microservices architecture
 - Improved API performance and reduced latency by optimizing database queries, minimizing response payloads, and implementing Redis caching
 - Increased system throughput and reduced database load by introducing in-memory and distributed caching strategies for high-frequency operations
 - Contributed to backend architecture design, ensuring reliable inter-service communication and data consistency across microservices
-

Engineering Intern

Otusone LLP

Feb 2023 – Nov 2023

- Built and optimized REST APIs for order and product management, reducing response time by ~30%
 - Developed and enhanced frontend components, improving user engagement by ~20% and overall UX by ~25%
 - Implemented automated cron-based push notification systems, increasing user engagement by ~15%
 - Designed email automation workflows, reducing manual operational effort by ~40%
-

PROJECTS

HireFlow – Talent Acquisition Platform (Java, Spring Boot, Microservices, Next.js, PostgreSQL, MongoDB, AWS, Redis, WebRTC)

- Architected a scalable multi-tenant ATS platform ensuring tenant-level data isolation and efficient onboarding
- Designed microservices architecture using Spring Boot with service discovery (Eureka) and centralized routing via API Gateway, leveraging PostgreSQL (structured data) and MongoDB (flexible schemas)
- Built a real-time video interview system using WebRTC and WebSocket signaling for low-latency communication and Integrated Razorpay for secure and seamless payment processing.
- Implemented Redis caching to improve response times and system performance

Online Food Ordering Platform (Java, Spring Boot, MySQL, React, Redis, Kafka, Stripe)

- Engineered a full-stack food ordering system with RESTful APIs for menu browsing, cart management.
- Integrated Stripe payment gateway for secure transaction processing and order placement
- Designed an event-driven architecture using Kafka for asynchronous order processing and notifications
- Optimized MySQL queries and implemented Redis caching, improving data retrieval performance by ~30%

Real-Time Chat Application (Next.js, Spring Boot, WebSocket (STOMP), WebRTC, MongoDB)

- Built a scalable real-time chat platform supporting 1:1 & group messaging with live updates using WebSocket (STOMP/SockJS), enhanced with AI-powered message suggestions and auto-completion.
- Implemented JWT-based authentication with secure session handling, token expiry management, and auto re-auth flow.
- Developed WebRTC-based audio/video calling with STOMP signaling for reliable cross-network communication.
- Designed and deployed a full-stack system using Spring Boot + MongoDB + Next.js, featuring advanced chat UX and cloud deployment (Vercel, AWS, Atlas)

SKILLS

Languages: Java, JavaScript

Backend: Spring Boot, Node.js, Express.js, Spring AI, LLM Integration

Frontend: React, Next.js

Databases: MySQL, PostgreSQL, MongoDB

Tools: Redis, Kafka, AWS, Jenkins, Git

Core Concepts: Microservices, Distributed Systems, System Design, REST APIs, AI Integration, Prompt Engineering

ACHIEVEMENTS

- Strong expertise in Java fundamentals, including multithreading and JVM internals
- Solid understanding of scalable system design and distributed architecture patterns
- Solved 600+ DSA problems across LeetCode and Scaler, building strong problem-solving skills

EDUCATION

B.Tech (Electrical Engineering)

Dr. A.P.J. Abdul Kalam Technical University, Lucknow

2020
